```
The present invention describes a method for assessing whether a patient is afflicted with ovarian cancer by comparing: (1) the expression of a marker (1) (see ARPS9824 to ARP98330), in a patient sample; and (2) the normal level of expression of (1) in a control non-ovarian cancer sample, where a significant difference between the level of expression in (a) and (b) is an indication that the patient is afflicted with ovarian cancer. (1) have cytostatic activities and can be used in antisense gene therapy. The method, compositions and kits from the present invention can be used for: (1) assessing and treating ovarian cancer; (2) making isolated for: (3) inhibiting ovarian cancer in a patient. ARF98573 to ARF98593 represent human kinase marker primers and probes which are used in the exemplification of the present invention
                                                                                                                                                                                                                                           Detection, assessment, prevention and therapy comprises detecting changes in the expression

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The invention relates to a gene expression profile comprising one or more genes (ABZ34889-ABZ35692) and generated from a cell type. The cell type is a coronary artery endothelium, umbilical artery or vein endothelium, aortic endothelium, dermal microvascular endothelium, pulmonary artery endothelium, myometrium microvascular endothelium, keratinocyte epithelium, bronchial epithelium, mammary epithelium, prostate epithelium, cenal cortical epithelium, renal tubule epithelium,

muscle, neonatal dermal fibroblast, pulmonary artery smooth muscle, neonatal dermal fibroblast, pulmonary artery smooth muscle, dermal fibroblast, pulmonary artery smooth muscle, actroblast, action for a strong dermal fibroblast, astrocytes, actric smooth muscle, mesangial cells, coronary artery smooth muscle, bronchial smooth muscle, uterine smooth muscle, lung fibroblast, costeoblasts or prostate stromal cell. The gene expression profile is used for determining the level of RNA expression for a sample, determining the phenotype of a cell and distinguishing cell types. The gene or a protein expression profile is useful in identifying disease pathologies involving alterations of gene expression. The assessment of expression profiles may provide meaningful information with respect to tumour type and stage, treatment methods, and prognosis. The gene or protein expression profile may also be used for creating microarrays. The microarray is useful for genetic and physical mapping of genomes, DNA sequencing, genetic or medical diagnosis, genotyping of organisms, confirming cell or tissue identifications and in identifying promising antibiotics, antiviral or

The method involves the use of specific DNA markers. The method of the invention is useful in the detection and treatment of ovarian and breast cancer. DNA sequences ABT31894 - ABT31949 encode human breast/ovarian cancer-related proteins
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       GGGCCCTTGTCCTGGGCCATGGCCCAGAAGGGGGTCCTGGGGCCTGGGCCAGCTGGGGGCT 140
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       GTGGCCAATTCTGACTCATACTCACTTTACGGGTTGGTGCCGTCCGGACCCGCTAGGGGC 120

The invention relates to human prostasin-like enzyme polypeptides and polynucleotides. The enzyme can be expressed by standard recombinant methodology. The polypeptide, polynucleotide and modulators are useful cor treating diseases like metastasis of malignant cells, tumour angiogenesis, inflammation, chronic obstructive pulmonary disease (COPD), atherosclerosis, neurodegenerative disease and pathogenic infection, particularly viral infection. The prostasin-like enzyme gene provides a therapeutic target of decreasing the enzyme activity, in particular for treating or preventing metastatic cancer. Neurodegenerative diseases in include for e.g. prion protein amyloid plaques of Genstmann-Straussler Syndrome, Creutzfeldt-Jakob disease and Scrapie. The agonists and antagonists of the polypeptide may be useful to treat osteoporosis, contagonists of the polypeptide may be useful to treat osteoporosis, antagonists of the polypeptide may be useful to treat osteoporosis, managonists of the polypeptide may be useful to treat osteoporosis, managonists of the polypeptide may be useful to treat osteoporosis, managonists of the polypeptide may be useful to treat osteoporosis, managonists of the progression of restenosis and atherosis. Anti-human prostasin-like enzyme activity inhibit the progression of restenosis and atherosis. Novel human prostasin-like enzyme polypeptide and polynucleotide which can be regulated for treating metastasis of malignant cells, inflammation, atherosclerosis, neurodegenerative disease and pathogenic biopsy specimens, plasma samples and body fluids. The present sequence represents a cDNA encoding a human prostasin-like serine protease like serine protease antibodies are useful for immunodetection and diagnosis of micrometastases, autoimmune lesions and renal failure in Sequence 944 BP; 150 A; 318 C; 318 G; 158 T; 0 U; 0 Other; Claim 1; Fig 5; 125pp; English. inflammatī infection.
